

Ajay Arora

arora.ajay90@gmail.com | linkedin.com/in/ajay-arora1 | github.com/ajayarora1

Skills

Languages: C++, C#, Python, JavaScript (ES6+), HTML5/CSS3

Frameworks & Libraries: React, [Node.js](https://nodejs.org/), ASP.NET

Databases & Cloud: SQL, PostgreSQL, Azure

Tools & Methodologies: Linux, Git, REST APIs, CI/CD pipelines, Agile/Scrum

Experience

Software Developer, Pipewise Technology Ltd. – Calgary, AB Nov 2023 – Present

- Developed C++ backend components for a distributed, real-time data processing system, optimizing PostgreSQL queries to improve data processing performance.
- Engineered low-latency Linux services for data ingestion, utilizing multi-threading techniques to maximize hardware throughput and system reliability under heavy data loads.
- Deployed scalable cloud infrastructure on Azure, migrating core backend features to cloud-native environments to enhance system fault tolerance.
- Developed internal REST APIs and responsive React data interfaces, streamlining real-time telemetry visualization for cross-functional engineering teams.

Junior Software Developer, Pipewise Technology Ltd. – Calgary, AB Nov 2022 – Nov 2023

- Refactored large C++ legacy codebases, implementing modern OOP design patterns to reduce technical debt, improve memory management, and accelerate system speeds.
- Built real-time front-end dashboards using JavaScript and modern UI frameworks, enabling real-time monitoring and visualization of operational data.
- Engineered a secure, cloud-hosted client portal, optimizing relational database queries to streamline secure external data delivery and user communication.

Web Developer, Centennial Mat Services – Calgary, AB Jan 2021 – June 2021

- Engineered a responsive enterprise web application, utilizing modern JavaScript architectures to optimize cross-platform performance and user retention.
- Managed end-to-end deployment workflows, cloud hosting infrastructure, DNS configurations, and production rollouts to ensure high uptime and security.
- Collaborated directly with corporate stakeholders to translate business logic into scalable front-end components and clean UI designs.

Projects

Interactive Pokemon Encyclopedia ajayarora1.github.io/Interactive_Pokedex/

- Developed a responsive single-page React application that consumes REST APIs to dynamically retrieve, cache, and display Pokémon data with advanced search and filtering capabilities.
- Designed reusable component-based UI architecture with asynchronous data fetching and client-side state management to deliver a fast, interactive user experience.

Library Inventory Processor https://github.com/AjayArora1/Library_Book_Processor

- Built a full-stack inventory management application using ASP.NET (C#) and SQL to perform CRUD operations, inventory tracking, and relational data management.
- Designed SQL schemas and optimized database queries while implementing a clean layered architecture separating presentation, business logic, and data access.

Education

Thompson Rivers University - Bachelor's Degree in Computer Science

June 2022
